

## Your Air, Our Technology.

Energy Harness is creating an environment where you can breathe easy again, knowing your air is being cleaned safely while you are in school. How you ask? By implementing UVC airflow technology that eradicates 99.9% of the virus within 1 second in the most vulnerable areas of the school (e.g. cafeterias, band rooms, weight rooms, choir rooms, and select classrooms).

This effort aligns with the CDC's recommended air quality risk mitigation strategy which includes improved ventilation and filtration of your air before irradiating air pathogens with UVC technologies.

Let's be proactive in doing more than just the basics (mask, hand sanitizer, surface cleaning) to protect the students. What better way than to destroy the virus where it's most prevalent, IN THE AIR. By adding the UVC devices, we are doing just that and are protecting the students and staff against Covid-19 and future airborne pathogens such as influenza.
