

Testimonial -

"I just had to let your management team know how grateful I am for your Install Team! They made my boss, who is the owner of Therapy One, so happy! Your install team is Outstanding! They are like a breath of fresh, clean air after a storm! It is so good to finally get work done by a company with people who not only love what they do, but also care about the people they do the work for! They came back this morning to check on the install one final time! When my boss is ready to redo the lighting at another Therapy One location on the beach, he WILL be calling you guys! I'm going to recommend y'all to everyone who asks about upgrading their lighting."

~ Jimmy

Energy Conserved is Energy Produced

The Project

Upgrading the interior lighting we were able to provide better light coverage with even distribution and increased visible light. By installing energy-efficient LED lighting we were able to lower the overall maintenance costs and in return, help the environment by lowering electric company emissions.

The Energy Harness installation team strategically positioned the lights throughout the rehabilitation center. The outcome was exactly as designed with a bright, even blanket of light spread across the facility.
